

# How Does ShadowHQ Work

3x faster breach response and recovery with ShadowHQ

ShadowHQ gives your response teams a powerful platform that eliminates the fog of war by aligning communication, processes, and information delivery during critical events.

## You've Been Hacked

Your cybersecurity systems alert you to a potential breach that is likely to compromise your employees and the core systems you rely on. You bring your existing systems down as you prepare to respond.

## Activate ShadowHQ

Your crisis management teams activate ShadowHQ, instantly gaining access to a secure communications channel, business continuity & cyber response plans, war rooms, and real-time updates.

## Contain the threat

Your crisis management teams start containing the threat by executing your mitigation strategy through a virtual bunker that's secure and isolated from your core systems. Teams can engage in voice, video, and group chats, share updates, and prioritize tasks.

## Return to normal operations

Once the threat is contained and critical systems are secure and under your control, ShadowHQ is deactivated. ShadowHQ will remain out of sight, ensuring your company has an on-demand critical event response solution should another breach occur.
